No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1983 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 51

NUMBER 1, JULY 1983

EVIEW ARTICLE

Z. ZLATEV, R. BERKOWICZ, AND L. P. PRAHM. Stability Restrictions on Time-Stepsize for Numerical Integration of First-Order Partial Differential Equations 1

ALPH MENIKOFF AND CHARLES ZEMACH. Rayleigh–Taylor Instability and the Use of Conformal Maps for Ideal Fluid Flow 28

OGEN AND B. SCHIFF. Constrained Finite Elements for Singular Boundary Value Problems 65

ILLIAM L. BRIGGS, ALAN C. NEWELL, AND TALIB SARIE. Focusing: A Mechanism for Instability of Nonlinear Finite Difference Equations . . 83

BRUCE LANGDON, BRUCE I. COHEN, AND ALEX FRIEDMAN. Direct Implicit Large Time-Step Particle Simulation of Plasmas 107

. A. KELMANSON. An Integral Equation Method for the Solution of Singular Slow Flow Problems 139

A. J. FLETCHER. A Comparison of Finite Element and Finite Difference Solutions of the One- and Two-Dimensional Burgers' Equations . . . 159

ST OF FORTHCOMING ARTICLES 189

NUMBER 2, AUGUST 1983

ASAHARU TANEMURA, TOHRU OGAWA, AND NAOFUMI OGITA. A New Algorithm for Three-Dimensional Voronoi Tessellation 191

R. WIENKE. Suprathermal Electron Deposition in Plasmas with the Fokker–Planck Method 208

EORGE A. BAKER, JR. AND JOHN E. BROLLEY. Deconvolution of Noisy Experimental Data 227

OBERT B. PEARSON, JOHN L. RICHARDSON, AND DOUG TOUSSAINT. A Fast Processor for Monte-Carlo Simulation 241

HOOGLAND, J. SPAA, B. SELMAN, AND A. COMPAGNER. A Special-Purpose Processor for the Monte Carlo Simulation of Ising Spin Systems 250

OIETTA KUO-PETRAVIC, ALLEN H. BOOZER, JAMES A. ROME, AND RONALD H. FOWLER. Numerical Evaluation of Magnetic Coordinates for Particle Transport Studies in Asymmetric Plasmas 261

J. P. CULLEN. Analysis of Some Low-Order Finite Element Schemes for the Navier–Stokes Equations 273

J. P. CULLEN. Experiments with Some Low-Order Finite Element Schemes for the Navier–Stokes Equations 291

WOLFRAM NEUTSCH. Optimal Spherical Designs and Numerical Integration on the Sphere 313
A. FRENKEL. A Chebyshev Expansion of Singular Integral Equations with a Logarithmic Kernel 326
A. FRENKEL. A Chebyshev Expansion of Singular Integrodifferential Equations with a $\partial^2 \ln|s-t|/\partial s\,\partial t$ Kernel 335
A. DAVEY. An Automatic Orthonormalization Method for Solving Stiff Boundary-Value Problems 343

NOTE

W. M. PICKERING. Nonpolynomial Finite Difference Schemes and the Use of the Fast Fourier Transform 357

LIST OF FORTHCOMING ARTICLES 364

NUMBER 3, SEPTEMBER 1983

ANDREA PROSPERETTI AND JEFFREY W. JACOBS. A Numerical Method for Potential Flows with a Free Surface 365
C. L. COX, G. J. FIX, AND M. D. GUNZBURGER. A Least Squares Finite Element Scheme for Transonic Flow around Harmonically Oscillating Airfoils 387
D. CEPERLEY. The Simulation of Quantum Systems with Random Walks: A New Algorithm for Charged Systems 404
F. F. GRINSTEIN, H. RABITZ, AND A. ASKAR. The Multigrid Method for Accelerated Solution of the Discretized Schrödinger Equation 423
RAM P. MANOHAR AND JOHN W. STEPHENSON. Single Cell High Order Difference Methods for the Helmholtz Equation 444
M. G. G. FOREMAN. An Analysis of Two-Step Time Discretizations in the Solution of the Linearized Shallow Water Equations 454
RODNEY J. MASON. Implicit Moment PIC-Hybrid Simulation of Collisional Plasmas 484
F. W. J. OLVER AND J. M. SMITH. Associated Legendre Functions on the Cut 502

NOTES

FRANCISCO M. FERNÁNDEZ, ALEJANDRO M. MESÓN, AND EDUARDO A. CASTRO. Accurate Calculation of the Eigenvalues of the $x^2 + \lambda x^2/(1 + gx^2)$ Potential 519
TOMASO POMENTALE. Periodic Solutions of Differential Equations and One-Parameter Family of Operators 527

LIST OF FORTHCOMING ARTICLES 536

AUTHOR INDEX FOR VOLUME 51 537

Journal of Computational Physics

INFORMATION FOR AUTHORS

The purpose of the *Journal of Computational Physics* is to publish articles concerning techniques eloped in the solution of data handling problems and mathematical equations, both arising in the cription of physical phenomena.

Manuscripts should be submitted to: *Journal of Computational Physics*, Lawrence Livermore National boratory, University of California, P. O. Box 5509, L-561, Livermore, California, 94550.

Original papers only will be considered. Manuscripts are accepted for review with the understanding t the same work has not been and will not be published nor is presently submitted elsewhere, and that persons listed as authors have given their approval for the submission of the paper; further, that any son cited as a source of personal communications has approved such citation. Written authorization y be required at the Editor's discretion. Articles and any other material published in the *Journal of mputational Physics* represent the opinions of the author(s) and should not be construed to reflect the nions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, pyright in the article, including the right to reproduce the article in all forms and media, shall be signed exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Manuscripts should be typewritten with wide margins on high quality 8.5 × 11 nd paper, using double spacing throughout. The original and two copies should be submitted; wever, in order to expedite handling of manuscripts, the original and four copies would be desirable. pies should include figures and tables.

Each page of the manuscript should be numbered. The first should contain the article title, author and author names and complete affiliation(s). At the bottom of this page, the number of manuscript pages, ures, and tables should be noted. The second page should contain a proposed running head of less n thirty-five characters. It should also contain the name and complete mailing address of the person whom proofs are to be sent.

With the exceptions noted below, authors should be guided by the *Style Manual*, 1978, of the nerican Institute of Physics.

Subject Classification. As of January 1981 authors are required to classify their own manuscripts ng the 1980 *Mathematics Subject Classification*, reprinted from the 1978 *Mathematical Reviews dex*, pp. S27–S34, with the additional classifications listed in the January 1, 1981 issue. Authors are uested to choose at least two categories, one in numerical analysis category, 65, and one other, nerally a physical classification, from the categories beyond 65. Page one should contain at least two ch classification index numbers.

Abstract. Page 3 should contain a short abstract.

List of Symbols. It is of vital importance that the author submit a complete list of symbols. The mbols used should be identified for the typesetter **phonetically.** This list will not appear in print, but is ential to avoid costly corrections in proof.

Tables. Number tables consecutively with Roman numerals. Extensive tables will be reproduced as otoengravings, and should be typed carefully in the **exact** format desired. Authors will be charged for y new engravings necessitated by changes in proof. Use superscript lower-case italic letters (*a*, *b*, *c*) table footnotes, which should be typed immediately below the table. Type tables at least double-aced, including titles and footnotes. Do not underline table titles; reserve underlining for text that is to *italicized.*

Equations. Equations should be typewritten whenever possible, and the number placed in parentheses at the right margin. Reference to equations should use the form "Eq. (3)" or simply "(3)". Superscripts and subscripts should be typed or handwritten clearly above and below the line, respectively. Use the exponent $^{1/2}$ whenever possible.

References. References should be cited in the text by a number in square brackets. Literature cited should appear on a separate page at the end of the article, and should be styled and punctuated according to the following examples:

1. J. G. Dee, *Ann. Phys.* (*N.Y.*) **61** (1969), 880.
   [Underline only names of journals.]
2. R. P. Shutt, "Bubble and Spark Chambers," Vol. 2, p. 50, Academic Press, New York/London, 1967.
3. W. B. Thompson, Kinetic Theory of Plasma, in "Advanced Plasma Theory" (M. N. Rosenbluth, ed.), Chap. 1, Academic Press, New York, 1964.

For unpublished lectures of symposia, include title of the paper, name of the sponsoring society in full, and date. For journal names, follow the style of *Chemical Abstracts Service Source Index*, 1980. Abbreviation of AEC Laboratory Report names should follow the style of *Nuclear Science Abstracts*.

Footnotes. Footnotes in the text should be avoided if at all possible. If they must be used, identify by superscript numbers and type together on a separate page, double spaced.

Figures. All illustrations are to be considered as figures. Number each graph or drawing in sequence with Arabic numerals. Supply a descriptive legend for each figure. Type legends double-spaced consecutively on a separate page. The **original** figures are required. Copies are **unacceptable.**

Plan figures to fit the proportion of the printed page. Use a professional lettering set on the original so that the letters and numbers are large enough and "open" enough to take a reduction of 50 to 60% without filling in with ink. Do not include background grids; however, on paper with blue lines the grid can be eliminated in the process of photoreproduction. Identify each figure in a margin with the name of the journal, author's name, and figure numbers; avoid marking the backs of figures.

Proofs. Galley proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased.

Notes

Short notes regarding the availability of interesting and useful new programs or tabular material will be considered for publication. Letters to the Editor commenting on articles already published in this Journal will also be considered. Neither notes nor letters should have an abstract.
